

Recommended Species List
for
Kennecott Utah Copper
Barney's Canyon

M/035/009

Prepared by DOGM May 26, 1992

The seed mix found on Table 5.6-1 of the original February 1988 Notice of Intent should be used across the entire site, with the following exceptions:

1. Under grasses please include:

<u>Common Name</u>	<u>Species Name</u>	<u>*Rate lbs/ac (PLS)</u>
Indian ricegrass*	Oryzopsis hymenoides	2
Orchard grass	Dactylis glomerata	2
Sheep fescue	Festuca ovina	2

* Indian ricegrass need only be used on areas where no topsoil is to be applied (southern face of Melco Dumps).

2. Under forbs please include:

Palmer penstemon	Penstemon palmeri	.5
------------------	-------------------	----

Please remove:

Firewheel	Gaillardia pulchella
-----------	----------------------

3. Tube stock need only be applied to non-topsoiled areas (southern face of Melco Dumps). Tube stock should be applied at the rate of 45 plants per acre. Tube stock planting needs to follow the methodology described on page 114 of the original February 1988 Notice of Intent. In addition to what is described in the plan, protective netting or tubing should be applied to each shrub tubling or clump of tublings. This will prevent mortality from wildlife grazing. Also, a mixture of 50% soil and 50% mulch should be applied to the planting holes, instead of 100% mulch as indicated in the plan.

4. The seeding rates in Table 5.6-1 of the plan and those shown here are for drill seed application. In areas where seed is to be broadcast, the rate should be doubled.
